Users have a backup tool. But this way it doesn't work? Please help. Please note: In order to use some of the described features, you need to have at least the following: Microsoft Silverlight, Microsoft. Windows Live Messenger key. Nti Media Maker 9 Premium serial number is a unique, customizable code that you can download and use. Simple, detailed instructions are provided. A: Some of the previously provided answers are not entirely accurate. In particular the original Microsoft key activation URL (is no longer functional. After reading this answer from Microsoft, the easiest method is to download a copy of the .msu file from the Microsoft activation page, and use the Uninstall button to remove the trial version of the software from the computer. Windows Media Player will then detect that the trial version is no longer installed, and ask if you'd like to download the full version. Click the "No Thanks" button, and follow the next few steps to make sure you have the full version of the software. That link is outdated and the activation key is no longer valid. Q: Why can't I run ActiveRecord with bundle exec on Heroku? I have a rails app that is set up to use Mysql database. I use Postgresql on my local machine. I just added bundle exec to my Gemfile and everything is fine locally. But when I try to deploy to Heroku, I get the following: Ruby version 2.1.2. runtime Ruby/Rack 1.9.3 Bundler version 1.12.5 Gemfile: app.json: server.js: 2d92ce491b
